SIDDHARTH SHEKHAR

Backend Developer | Golang, Microservices, High-Concurrency Systems

siddharth.shekharr@gmail.com +91 8887743696 Ballia, Uttar Pradesh linkedin.com/in/siddharttth

PROFESSIONAL SUMMARY

Backend Developer with 2.5+ years of experience (including a 1-year internship) building high-concurrency Golang services and microservices on AWS. Cut API latency by 60% (500ms to 200ms) on a Go platform handling 10,000+ concurrent requests for 2M+ active users, with zero downtime during live events. Hands-on with PostgreSQL, Redis caching, Docker, Linux and CI/CD, and also builds Python services and AI workflows.

PROFESSIONAL EXPERIENCE

Software Development Engineer 03/2025 – Present | Bangalore, India
ScaleX

ClickNumero & Horocosmo – High-Concurrency Influencer Platforms - PRODUCTION [ClickNumero ⧉, Horocosmo ⧉]

- Optimized the Go-based architecture for Horocosmo, cutting API response latency by 60% (500ms to 200ms) and sustaining real-time traffic surges during live events with zero downtime
- Developed high-concurrency backend systems serving 2M+ active users for influencer platforms, handling 10,000+ concurrent requests during peak traffic
- Built a Redis caching layer that decreased database load by 55% and improved average page load time by 40%
- Ensured 99.9% system uptime through robust error handling, CloudWatch monitoring, and AWS deployments via GitHub-driven CI/CD pipelines
- Overhauled the Python-based API layers for ClickNumero, improving database query performance by 45% and reducing third-party analytics integration time by 70%

Astroverse – Dating Platform Backend - PRODUCTION [APP STORE ⧉, PLAY STORE ⧉]

- Co-architected the scalable backend for the Astroverse dating platform, designing the core PostgreSQL schema to support 100K+ active users and 50M+ profile interactions
- Optimized the matching algorithm to process 10,000+ profile comparisons per second while maintaining data privacy and GDPR compliance
- Implemented an AWS microservices architecture (EC2, Lambda, RDS) that auto-scaled to handle 5X traffic spikes during marketing campaigns
- Built JWT-based authentication and collaborative-filtering matching algorithms, achieving a 78% match satisfaction rate with sub-200ms response times

MakeUGC – AI Video Ads Generation Platform

- Architected and deployed an end-to-end AI video engine from scratch, automating creator-economy workflows for 1,000+ users and cutting manual video production time by 85%
- Orchestrated a multi-model AI pipeline integrating Claude (scripting), ChatGPT (content generation), ElevenLabs (audio synthesis) and Wan2.1 with ComfyUI (video generation), processing 500+ videos daily
- Scaled AWS infrastructure with EC2 clusters across 3 availability zones, 1TB+ of assets in S3 and Elastic IPs for 99.9% endpoint availability
- Owned the full development lifecycle on GitHub with automated CI/CD pipelines, reducing deployment time from 4 hours to 15 minutes

EDUCATION

Bachelor of Engineering, Computer Science 2022 – 2025
Pranveer Singh Institute of Technology, Kanpur

Diploma in Mechanical Engineering 2019 – 2022
Dayalbagh Educational Institute, Agra

TECHNICAL SKILLS

Languages
Golang, Python, SQL, JavaScript, C++

Go & Backend
Gin, Goroutines & Concurrency, REST APIs, gRPC, Protobuf, Microservices, Distributed Systems, Event-Driven Architecture, Kafka, RabbitMQ, Low-Latency APIs, JWT Authentication, FastAPI

Cloud & Infrastructure
AWS (EC2, S3, Lambda, RDS, CloudWatch, SQS), GCP, Azure, Docker, Kubernetes, Helm, Terraform, Linux, PostgreSQL, MySQL, Redis, MongoDB, Cassandra, GitHub Actions, CI/CD, Observability

AI & Machine Learning
LLM Integration, Claude API, OpenAI API, RAG, AI Agents, AI Workflow Orchestration, Prompt Engineering, ElevenLabs

INTERNSHIP EXPERIENCE

Software Development Engineer Intern 03/2024 – 03/2025 | Bangalore, India
ScaleX

- Engineered RESTful APIs for a real-time cricket stock trading platform, enabling 5,000+ users to trade player stocks based on live performance metrics
- Implemented a dynamic pricing algorithm that adjusted stock values in real time with 99.95% accuracy, simulating equity market behavior
- Ran rigorous stress testing and reduced critical latency issues by 65%, keeping the platform stable at peak traffic (100K+ concurrent users)
- Documented and tested the JavaScript codebase, achieving 90%+ code coverage and meeting technical stability standards
